

1 1. In a computerized system that includes a content server, a mobile gateway,
2 and a first and a second mobile client, the first and second mobile clients differing from each
3 other in at least one operating characteristic, wherein the mobile gateway receives content
4 that is addressed to the first and second mobile clients from the content server, a method of
5 customizing the content based on at least one operating characteristic of each mobile client,
6 wherein the customizing avoids further processing at the content server, the method
7 comprising a mobile gateway performing the acts of:

8 assigning a first transform to the first mobile client and assigning a second
9 transform to the second mobile client, the first and second transforms specifically
10 considering one or more operating characteristics of the first and second mobile
11 clients;

12 receiving content from the content server;

13 altering the content according to the first and second transforms so that the
14 content is compatible with the one or more operating characteristics of the first and
15 second mobile clients, the altered content comprising a first transformed content and
16 a second transformed content;

17 establishing a communication link between the mobile gateway and the first
18 and second mobile clients; and

19 sending the first transformed content to the first mobile client and sending the
20 second transformed content to the second mobile client.

21
22 2. A method as recited in claim 1 further comprising the act of at least one of
23 the transforms encrypting the content.
24

3. A method as recited in claim 1 further comprising the act of at least one of the transforms compressing the content.

4. A method as recited in claim 1 wherein at least one of the mobile clients is one of a telephone, a pager, a personal digital assistant, and a cascaded mobile gateway.

5. A method as recited in claim 1 wherein the first transformed content comprises a notification that additional content is available at the content server, the method further comprising the acts of:

receiving a request for the additional content from the first mobile client,

retrieving the additional content from the content server;

altering the additional content according to the first transform so that the content is compatible with the one or more operating characteristics of the first mobile client, the act of altering producing a first transformed additional content; and

sending the first transformed additional content to the first mobile client.

6. A method as recited in claim 1 wherein the one or more operating characteristics considered by the first and second transforms include at least one of the first and second mobile client's software, processor, memory, display, and communication link.

1 7. A method as recited in claim 1 wherein the computerized system includes a
2 third mobile client, the method further comprising the acts of:

3 assigning the first transform to the third mobile client, the first transform
4 specifically considering one or more operating characteristics of the third mobile
5 client; and

6 sending the first transformed content to the third mobile client.
7

8 8. A method as recited in claim 1 wherein the content received from the content
9 server is addressed to a list containing the first and second mobile clients, the method further
10 comprising the act of addressing the content specifically to the first mobile client and to the
11 second mobile client as defined in the list.
12

13 9. A method as recited in claim 1 wherein the content comprises one of email,
14 calendar, contact, task, Web, notification, financial, configuration, and sports content.

24

1 10. In a computerized system that includes a content server, a mobile gateway,
2 and a first mobile client, wherein the mobile gateway receives from the content server,
3 content that is addressed to the first mobile client, a method of customizing the content
4 based on at least one operating characteristic of the first mobile client, wherein the
5 customizing avoids further processing at the content server, the method comprising a mobile
6 gateway performing the acts of:

7 assigning a first transform to the first mobile client, the first transform
8 specifically considering one or more operating characteristics of the first mobile
9 client;

10 receiving content from the content server;

11 altering the content according to the first transform so that the content is
12 compatible with the one or more operating characteristics of the first mobile client,
13 the altered content comprising a first transformed content;

14 establishing a communication link between the mobile gateway and the first
15 mobile client; and

16 sending the first transformed content to the first mobile client.

17
18 11. A method as recited in claim 10 wherein the one or more operating
19 characteristics considered by the first transform include at least one of the first mobile
20 client's software, processor, memory, display, and communication link.

21
22 12. A method as recited in claim 10 further comprising the act of the first
23 transform encrypting the content.
24

1 13. A method as recited in claim 10 further comprising the act of the first
2 transform compressing the content.

3
4 14. A method as recited in claim 10 wherein the first transformed content
5 comprises a notification that additional content is available at the content server, the method
6 further comprising the acts of:

7 receiving a request for the additional content from the first mobile client,

8 retrieving the additional content from the content server;

9 altering the additional content according to the first transform so that the
10 content is compatible with the one or more operating characteristics of the first
11 mobile client, the act of altering producing a first transformed additional content; and

12 sending the first transformed additional content to the first mobile client.

13
14 15. A method as recited in claim 10 wherein the first mobile client is one of a
15 telephone, a pager, a personal digital assistant, and a cascaded mobile gateway.

16
17 16. A method as recited in claim 10 wherein the content comprises one of email,
18 calendar, contact, task, Web, notification, financial, configuration, and sports content.

1 17. A method as recited in claim 10 wherein the computerized system includes a
2 second mobile client, the method further comprising the acts of:

3 assigning a second transform to the second mobile client, the second
4 transform specifically considering one or more operating characteristics of the
5 second mobile client;

6 altering the content according to the second transform so that the content is
7 compatible with the one or more operating characteristics of the second mobile
8 client, the altered content comprising a second transformed content;

9 establishing a communication link between the mobile gateway and the
10 second mobile client; and

11 sending the second transformed content to the second mobile client.
12

13 18. A method as recited in claim 17 wherein the content received from the
14 content server is addressed to a list containing the first and second mobile clients, the
15 method further comprising the act of addressing the content specifically to the first mobile
16 client and to the second mobile client as defined in the list.
17

18 19. A method as recited in claim 17 wherein the computerized system includes a
19 third mobile client, the method further comprising the acts of:

20 assigning the first transform to the third mobile client, the first transform
21 specifically considering one or more operating characteristics of the third mobile
22 client; and

23 sending the first transformed content to the third mobile client.
24

1 20. In a computerized system that includes a content server, a mobile gateway,
2 and mobile clients, wherein some of the mobile clients differ from each other in at least one
3 operating characteristic, and wherein the mobile gateway receives content that is addressed
4 to the mobile clients from the content server, a method of customizing the content based on
5 at least one operating characteristic of each mobile client, wherein the customizing avoids
6 further processing at the content server, the method comprising the mobile gateway
7 performing steps for:

8 associating content transforms with a first and a second mobile client, the
9 content transforms accounting for one or more operating characteristics of the first
10 and second mobile clients;

11 producing first transformed content and second transformed content based on
12 content from the content server and the content transforms; and

13 providing the first and second transformed content to the first and second
14 mobile clients.

15
16 21. A method as recited in claim 20 wherein at least one of the mobile clients is
17 one of a telephone, a pager, a personal digital assistant, and a cascaded mobile gateway.

18
19 22. A method as recited in claim 20 wherein the first transformed content
20 comprises a notification that additional content is available at the content server, the method
21 further comprising steps for:

22 producing a first additional transformed content based on a content transform
23 associated with the first mobile client; and

24 providing the first additional transformed content to the first mobile client.

1 23. A method as recited in claim 20 wherein the one or more operating
2 characteristics considered by the content transforms include at least one of the mobile
3 clients' software, processor, memory, display, and communication link.

4
5 24. A method as recited in claim 20 wherein the computerized system includes a
6 third mobile client, the method further comprising a step for providing the first transformed
7 content to the third mobile client, due to similarities in one or more operating characteristics
8 of the first and third mobile clients.

9
10 25. A method as recited in claim 20 wherein the content received from the
11 content server is addressed to a list of mobile clients, the method further comprising a step
12 for providing the content to each of the specific mobile clients contained in the list.

13
14 26. A method as recited in claim 20 wherein the content comprises one of email,
15 calendar, contact, task, Web, notification, financial, configuration, and sports data.

1 27. In a computerized system that includes a content server, a mobile gateway,
2 and a first mobile client, wherein the mobile gateway receives from the content server,
3 content that is addressed to the first mobile client, a computer program product for
4 implementing a method of customizing the content based on at least one operating
5 characteristic of the first mobile client, wherein the customizing avoids further processing at
6 the content server, comprising:

7 a computer readable medium for carrying machine-executable instructions
8 for implementing the method at a mobile gateway; and

9 wherein said method is comprised of machine-executable instructions for
10 performing the acts of:

11 assigning a first transform to the first mobile client, the first transform
12 specifically considering one or more operating characteristics of the first
13 mobile client;

14 receiving content from the content server;

15 altering the content according to the first transform so that the content
16 is compatible with the one or more operating characteristics of the first
17 mobile client, the altered content comprising a first transformed content;

18 establishing a communication link between the mobile gateway and
19 the first mobile client; and

20 sending the first transformed content to the first mobile client.

21
22 28. A computer program product as recited in claim 27 wherein the one or more
23 operating characteristics considered by the first transform include at least one of the first
24 mobile client's software, processor, memory, display, and communication link.

1 29. A computer program product as recited in claim 27, the method comprised
2 further of machine-executable instructions for the first transform performing the act of
3 encrypting the content.

4
5 30. A computer program product as recited in claim 27, the method comprised
6 further of machine-executable instructions for the first transform performing the act of
7 compressing the content.

8
9 31. A method as recited in claim 27 wherein the first transformed content
10 comprises a notification that additional content is available at the content server, the method
11 comprised further of machine-executable instructions for performing the acts of:

12 receiving a request for the additional content from the first mobile client,

13 retrieving the additional content from the content server;

14 altering the additional content according to the first transform so that the
15 content is compatible with the one or more operating characteristics of the first
16 mobile client, the act of altering producing a first transformed additional content; and

17 sending the first transformed additional content to the first mobile client.

18
19 32. A computer program product as recited in claim 27 wherein the first mobile
20 client is one of a telephone, a pager, and a personal digital assistant and wherein the content
21 comprises one of email, calendar, contact, task, Web, notification, financial, configuration,
22 and sports data.

1 33. A computer program product as recited in claim 27 wherein the computerized
2 system includes a second mobile client, the method comprised further of
3 machine-executable instructions for performing the acts of:

4 assigning a second transform to the second mobile client, the second
5 transform specifically considering one or more operating characteristics of the
6 second mobile client;

7 altering the content according to the second transform so that the content is
8 compatible with the one or more operating characteristics of the second mobile
9 client, the altered content comprising a second transformed content;

10 establishing a communication link between the mobile gateway and the
11 second mobile client; and

12 sending the second transformed content to the second mobile client.
13

14 34. A computer program product as recited in claim 33 wherein the content
15 received from the content server is addressed to a list containing the first and second mobile
16 clients, the method comprised further of machine-executable instructions for performing the
17 act of addressing the content specifically to the first mobile client and to the second mobile
18 client as defined in the list.
19
20
21
22
23
24

1 35. A computer program product as recited in claim 33 wherein the computerized
2 system includes a third mobile client, the method comprised further of machine-executable
3 instructions for performing the acts of:

4 assigning the first transform to the third mobile client, the first transform
5 specifically considering one or more operating characteristics of the third mobile
6 client; and

7 sending the first transformed content to the third mobile client.
